DETAILED ACTION

This Office Action is in response to the amendment filed 10 January 2003.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-16 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Prior Art (Figures 1 and 4).

Applicant's Prior Art discloses an electronic circuit package (Figs. 1 and 4) that contains a substrate (10) having a first surface and a second surface, wherein the first surface has a gating area, conductive traces (18) on first surface of substrate in the gating area, an electronic device (integrated circuit) (12) attached to first surface of substrate, electrical connections (wire bond) (16) between electronic device and conductive traces, input/output connections (ball grid array) (24) formed on second surface of the substrate, electrical connections (22) between conductive traces and input/output connections, encapsulation (14) formed over part of the substrate and the electronic device as an encapsulating mold compound and a encapsulating material (33) forming a mold runner. Applicant's Prior Art discloses all of the limitations except a barrier material attached to the gating area of the substrate. Whereas Huang discloses

an electronic device (Fig. 5) that contains a substrate (320) with a barrier material such as polyimide tape or high temperature plastic formed on the substrate. (Column 3, lines 45-47) The barrier material is added to stop warpage during encapsulant injection process. (Column 3, lines 37-38) Since Applicant's Prior Art and Huang are both from the same field of endeavor, electronic devices, the purpose disclosed by Huang would have been recognized in the pertinent art of Applicant's Prior Art. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention as made to modify the electronic device of Applicant's Prior Art by incorporating a barrier material on the substrate to prevent warping during the encapsulation injection process as taught by Huang.

Response to Arguments

Applicant's arguments with respect to claims 11-19 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2822

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
